

LIFTING FROM THE MIDDLE OF A PALLET

The next time you have to retrieve a part from the middle of a pallet, stand at the corner of the pallet to get close. But, if you can't stand at the corner, put your foot up on the pallet and bridge to your leg to get close. The only problem with putting your foot up however, is that you need to be aware of your surroundings before you do it. If the pallet will move when you put your foot on it, don't do it. The best thing then, is to ask that the pallet be moved over, so that you *can* step around the corner. Both methods work, but you have to pay attention to what you are doing in order to stay safe!
