

LOADING FISH BOXES INTO A CAN

Frozen fish boxes are heavy, especially if you are loading them by hand. A really good way to keep your back out of this job is with a **POWERLIFT® Tip-the-Load**. When you keep a wide stance and tip the load towards you it brings it up into a position that is much more manageable. Grasping it by the corners is an easy way to hold on to it, then when you set it down, set it on its edge. Once on its edge you can tip it down into position in the can. Tipping-the-Load is a really great way to make your job easier!
