

## HOW ABOUT SOME ERGONOMICS!

Take a look at the welding cart on the left and compare it to the cart on the right. Which cart would you rather load a cylinder up on? If there is some part of your job that is really tough or unsafe for you to do, such as lifting a cylinder up to a poorly designed cart, **do something about it!** Having done your job many times over, it is almost a sure thing that you have thought of an easier way to do it. Share your ideas and make a plan because everyone will benefit from your brainy idea!
