

MOVING A ROLL OF WIRE

So you've decided you want to use your legs instead of your back when you work. Now you want to move some rolls of wire off the pallet for easier access to carry them away. So how to do it? You can make this job about as easy as can be and not even take a step to move the wire if you use a wide stance **POWERLIFT®**. Notice how the worker has put one foot up onto the pallet and with his wide stance, he can move the wire several feet because his legs are carrying the load and not his back. Using **POWERLIFT®** has many advantages and one of them is to make your job easier and actually faster!
