

POWERLIFT®
Lifting Training that Works!

HANDLING HINGE PLATES

Lifting hinge plates off of a pallet is one of those tasks where using a **POWERLIFT®** Tip-the-Load will make the job easier. Before you lift the hinge, stand at the corner of the pallet so that you can access the load without reaching out. Then, as you go down to lift the plate, tip it with one hand while you bridge to your leg with your other hand. This is using all the leverage that can possibly be used, and will make this job easier, quicker and more efficient for you!
