

## OPENING A MANHOLE COVER WITH THE ASSIST

Here 's a good way to remove a cover with the assist that might make it easier for you. Instead of pulling the lid towards you to remove it, rotate it to the side. Rotating like this can take less effort because you don 't have the friction of the lid sliding on its base. Instead you are pivoting the cover as you move it off its base. Just be sure to keep a wide stance as you walk the cover around to remove it. This is another way for you to keep your back out of the job and put it on your legs!
