

POWERLIFT®
Lifting Training that Works!

PRESENTS

Bariatric Gait Belt & Lifting Sling

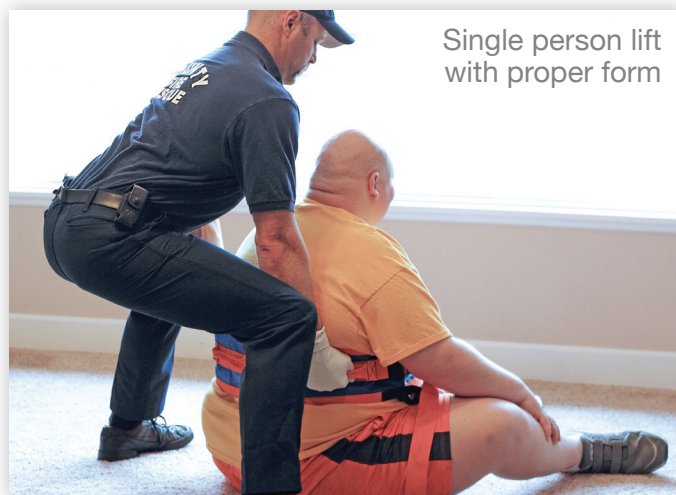

PowerLift is all about safe lifting. So, we're happy to introduce the best-in-class safe bariatric lifting aid, the Levigait **PEOPLE MOVER**. This unique and versatile tool was especially developed for the challenges that public safety people face in lifting and moving bariatric patients. When paired with the safe lifting techniques taught by PowerLift Training, departments can realistically look forward to seriously reducing or eliminating firefighter/EMS lifting injuries.

DESIGNED FOR FIRE & EMS PERSONNEL

Used by: Caregivers • Hospitals • Physical Therapists
Nursing Homes • Physicians • and many others!

About People Mover

- Save your personnel AND patients from injury and pain
- Save money - reduce workers' compensation claims and lost time expenses
- Reduce the liability of using makeshift and untested lifting equipment
- Lift more safely with fewer personnel
- Compact and lightweight
- One belt with multiple configurations means carrying less equipment
- Intuitive to learn and easy to use
- Handles the majority of bariatric patients
- Fits 36"-100" waist size
- Won't "cut in" like traditional gait belts
- Easy Decon, machine wash and air dry
- Proudly made in the USA

Single person lift
with proper form

Drastically reduce lifting injuries

The average workers' compensation back injury costs from \$40,000 to \$80,000. After hundreds of lifts and over 30 months of active duty, there are ZERO known patient or personnel lifting injuries since People Mover was placed in service! This device provides superior lifting form, patient control and comfort, and lifting technique flexibility. Weight rated to 600 lbs; independently tested to over 1,200 lbs.

Preparing for sling lift

Easily lift with up to 5 people

Single person "cam over" grip

About the Inventor

In his 20 year career as a firefighter, Mike Philips struggled to find a truly good bariatric lifting aid. While there were a few that might solve one aspect of bariatric lifting, none could handle the majority of the patient lifting challenges Public Safety personnel face every day. Out of need, he designed People Mover, a tool that handles about 90% of those lifting needs while also reducing costs. The People Mover costs less than most of the common lifting systems though it's significantly more versatile. Departments that have implemented the People Mover have virtually eliminated patient and firefighter injuries from patient lifting.
